

Hyperbridge

Blockchain Life Made Simple

Hyperbridge Vision

Designed to bridge the gap between blockchain technology and a consumer-grade user experience, our ecosystem currently consists of three interrelated technologies:

A decentralized, smart contract-enabled marketplace and platform

A data management and data monetization blockchain

A governance and digital management protocol

All powered by The Hyperbridge Republic Token (GOV), an ERC-20 utility token.

Hyperbridge

When your friend asks about cryptocurrency and the blockchain, just say Hyperbridge.

Project Goals

- To be the preeminent marketplace for decentralised applications
- To be the leading blockchain for the storage, security and monetization of web users data.
- To create a fair and just governance model that can be easily implemented and managed by others

Use Cases

- Social networking
- Website advertisement blocker or monetizer
- Automatic website payment detection
- Third-party payment methods
- Messaging platforms
- Identity platforms
- Smart home
- AI
- Gaming
